

# Round sling with steel core

WLL 2t, working length 3m

DGUV regulation 17 approved (formerly BGV C 1)

Sturdy and unobtrusive mounting

*Beispielabbildung*

- Heat-proof up to 175°C
- Observation window allows control of the inner steel ropes
- Secondary safety not necessary
- The round slings flexibility lets you work very efficiently
- Product labels inform about work limits and approvals
- Optionally embroidered with your logo

A special feature of the Major round sling is the steel core combined with a material-protecting shell made from black polyester fabric.

Distraction caused by reflections from the steel chains or wires is now a thing of the past. With its black coating, the sling is visually suited to the stage setting. The load bearing components of the sling consist of steel wires which eliminates the need for a secondary backup. The lightweight sling is ideal for the simple and unobtrusive suspension of lighting and audio equipment. The polyester shell can be opened for a material inspection using Velcro. This allows the wires to be quickly and easily checked for material damage or corrosion.
